Dynalectric Company of Ohio. Power today...value tomorrow.

Today's world of electrical contracting involves much more than simply wires, switches and light bulbs. From high-voltage distribution systems to leading-edge fiber optic and voice/data/video systems, from energy-efficient lighting to power circuitry for mission-critical data centers, the requirements have become increasingly complex. At the same time, today's competitive pace continually raises the bar for rapid installation and immediate service.

At Dynalectric Company of Ohio, we're familiar with these demanding challenges, not just because we face them everyday, but also because we've helped our clients meet them successfully for more than a quarter of a century. Add that we are part of EMCOR Group, a Fortune 500® company with a national knowledge network, and some of the industry's strongest bonding and insurance ratings, and you have all the expertise and financial resources you need to meet your most challenging requirements.

Backed by a distinguished tradition of integrity and long-term customer relationships, Dynalectric offers in-depth expertise, innovative problem solving capability, and high-performance systems that ensure long-lasting value.

Building on a tradition of success

For over 25 years, we've been one of the region's leading providers of high-performance electrical systems, innovative technology applications and expert services. Today, our client list includes more than 50 world-class businesses throughout the state. So regardless of your project's size or complexity, you can depend on us for systems and services that deliver consistently optimum operation and long-term value.

Project management that nails down the details: On every project, regardless of size or complexity, Dynalectric knows that we have to respect both your schedule and your budget. That's why we use a total project coordination methodology. It includes a full range of sophisticated planning, scheduling and tracking tools that ensure timely communications, effective quality control and rigorous cost management.

Designs tailored to fit your objectives: Dynalectric's design capabilities are your assurance of electrical installations tailored to your exact requirements. During your project's initial stages, we can identify and resolve potentially expensive constructability, building code and other issues. Then, as your project progresses, we can monitor construction quality, control costs and schedules, and reduce risks. You get faster startup and completion of facilities that meet — and exceed — your expectations.

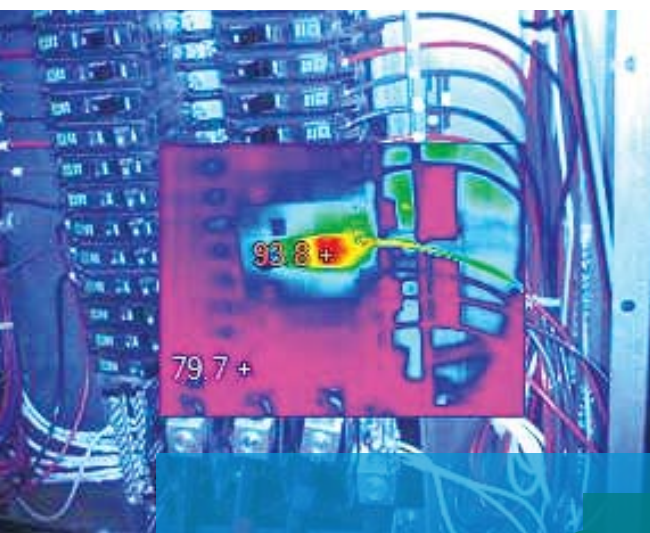

Value that keeps delivering: Dynalectric's complete lifecycle services help you achieve the full return on your facility investment. Our services begin with expert design, project management and installation. And when your building is up and wired, we continue to keep it productive through systematic preventive maintenance and facilities services. It's the continuous care you need to ensure reliable, productive operation and maximum investment protection.

Trained to be the best: When you work with us, you're always working with highly skilled, highly trained personnel. Furthermore, we support them with continuing education programs that provide up-to-date instruction on the latest communication, safety and installation techniques and tools. And we ensure that our approach consistently meets the highest quality standards through processes and procedures that are continuously refined and improved.

Mission-critical: When downtime isn't an option: In today's demanding environment, most organizations have "mission-critical" systems. For these, downtime simply isn't an option. Our experts understand this. They know how to provide the continuous maintenance services required to keep these systems functioning reliably and productively all the time. The result is high-performance facilities and non-disruptive operation.

Keeping your systems picture perfect: Our use of leading-edge infrared scanning technology let's us see what others can't. Using infrared sensors, this technology creates "temperature pictures" that highlight potential problem areas in your equipment. By performing these scans, we can detect these problems early, so we can help you avoid safety hazards, productivity losses and costly repairs, while ensuring the reliability of newly installed systems.

Facilities services: Enabling optimum performance day-to-day: Dynalectric Company of Ohio provides expert services that keep your entire facility operating smoothly, efficiently and productively. Whether it's high-voltage generators or low-voltage voice/data/video systems, energy-efficient lighting or high technology data circuits, you can depend on us for the superior skills, advanced knowledge and dependable service you need for premium performance all day... every day.

→ **Our use of infrared scanning thermography allows us to look inside your systems for defects, hazards and other problems that could be dangerous and costly.**

Electrical Services:

- Complete Electrical Distribution Systems
- Custom Maintenance Programs
- Emergency Power/UPS (uninterruptible power supply)/Generators
- Fire Alarm Systems
- Infrared Imaging
- Life Safety
- Low-Voltage Switchgear
- Network Design, Installation & Integration Services
 - Fiber Optic
 - Voice/Data/Video
- Paging, Nurse Call & Audio/Visual Systems
- Security Systems
- Temperature Control

Additional Services:

- Design Assist

A passion for safety and quality: Dynalectric's superior client care starts with our passion for safety and quality. It's evidenced by our ZERO Accident Program (ZAP), which has led to safety performance that's 5-to-10 times better than the national average. In addition, EMCOR companies have reduced their total recordable incident rate (TRIR) by 46 percent, a record that garnered applause from CNA Insurance Company for our safety program design and high level of safety performance. Recently, we increased our safety emphasis with PPE (Personal Productivity Equipment). Taking advantage of today's safety equipment advances that extend its benefits to a wider range of applications, PPE improves both safety and productivity by making this equipment's use mandatory for all employees, including project management and field leadership. And when it comes to quality, we measure our work by some of the highest standards in the industry, standards that emphasize client focus and a preventive approach to operations management. The result is less lost time, a safer environment for us and our clients, and projects delivered on time and on budget.

Service you can count on...no matter what...no matter when: Our complete emergency and preventive maintenance capabilities can keep your systems functioning properly 24/7/365, enhancing reliability and value. Trained in a full range of electrical disciplines and backed by a vehicle fleet ready to deliver inventory and equipment wherever they're needed, our technicians provide the kind of fast, effective service required to keep your facility operating at consistently high-performance levels.

What can we do for you?

Backed by a long and successful tradition of quality service, **Dynalectric Company of Ohio** offers a full complement of customized electrical, technological and service solutions for projects ranging from small to large, simple to complex.
